Work experience

Voltron Data | Ibis project | remote

Senior Technical Product Manager | April 2024 - present

- ...

Technical Product Manager | May 2023 - April 2024

- ...

dbt Labs | dbt Core & Cloud | remote

Product Manager | July 2022 - March 2023

- Launched Python models at Coalesce 2022, transforming dbt from SQL-only into a multilingual framework for more data practitioners running increasingly complex workloads, including the first ML use cases in dbt Cloud
- At critical inflection point, assumed management of internal platform team and led alignment of stakeholders on major roadmap adjustment to achieve better product outcomes and more efficient engineering execution

Microsoft | AI Platform (Azure ML) | Bellevue, WA

Product Manager II | March 2020 - July 2022

- Led development for v2 product features in the data & MLOps areas, resulting in higher usability score
- Reduced time from days to hours for customers to implement ML solutions by leading inter-organizational team to deliver standard v2 MLOps solution accelerators and merging disparate internal workstreams
- Improved strategy for examples and documentation in collaboration with key stakeholders, resulting in positive qualitative feedback from users and a significant increase in contributions from PMs and data scientists
- Increased satisfaction for strategic cloud customer as primary point of engagement for the product team

Product Manager | July 2018 - February 2020

- Filled gap in Azure MLOps marketing story by leading cross-disciplinary team of developers and data scientists to launch data drift monitoring feature ahead of major cloud competitors
- Led development of open-source contribution to Dask to run on Azure ML infrastructure
- Deprecated legacy internal products, managing engineering and working with customers on migration

Education

Rice University | 2014 - 2018 | Houston, TX

B.S. Electrical Engineering with Data Science specialization, 3.5/4.0 GPA

Skills & technologies

Advanced: Python (data science tools), GitHub, CLI tools

Intermediate: Go, UNIX/Linux systems, git, Docker, SQL, raspberry pi

Once upon a time: C, Perl, MATLAB, JavaScript, Verilog, FPGAs, CAD, 3D printing, Figma, PowerBI

Additional work experience

Convergent Engineering | New product research and development | Newberry, FL

Consultant | Summer 2017

- Delivered prototype system for alerting nurses to non-critical alarms in patient rooms, including live testing with IRB-approved study at the UF Shands Hospital in Gainesville, FL

Texas Instruments | System on a Chip (SoC) Design Verification | Dallas, TX

Design Engineering Intern | Summer 2016

- Reduced average SoC simulation runtime by six percent through discovery of optimal simulation configuration via benchmarking tool designed and implemented with engineering mentor
- Decreased time to debug SoC simulations by partnering with three engineers to build tools for efficient printf simulation and a user-friendly web interface to determine signal routing through chip components

Convergent Engineering | Various projects | Newberry, FL

Consultant | Summer 2015

- Automated data collection and analysis from proprietary e-pill devices with a CLI over Bluetooth

About me
